MAINZ

Бронепалубный крейсер

«МАЙНЦ»

Германия, 1909

Один из четырех крейсеров типа «Кольберг». Несмотря на внешнее сходство все корабли оснащались разными энергетическими установками. «Майнц» получил паровые турбины фирмы «AEG-Curtiss», которые вращали два трехлопастных гребных винта, что позволяло развивать скорость на 0,5 узла больше, чем однотипные крейсера.

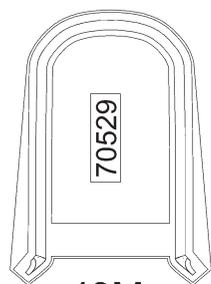

28 августа 1914 года во время патрулирования в районе острова Гельголанд «Майнц» подвергся атаке британских эсминцев, поддержанных крейсерами «Аретьюза» и «Фирлесс». В ходе короткого боя крейсер получил множество артиллерийских и одно торпедное попадание. Начались пожары, внутрь корпуса поступило боль-

шое количество воды. Руль заклинило в положении 10° на левый борт, а левая турбина была разбита. В 12:50 «Майнц» спустил флаг. Уцелевших членов экипажа снял британский эсминец «Лурчер». Через некоторое время «Майнц» затонул. Общие потери экипажа крейсера составили 89 человек.
